Cerebrum - Wikipedia

<https://en.wikipedia.org/wiki/Cerebrum>

The cerebrum is a large part of the brain containing the cerebral cortex (of the two cerebral hemispheres), as well as several subcortical structures, including the hippocampus, basal ganglia, and olfactory bulb. In the human brain, the cerebrum is the uppermost region of the central nervous system.

Taste and smell are tucked underneath the cerebrium, **out** of sight so far. Between the primary sensory areas are zones of sensory combination called association areas. Across the way from somatosensory cortex at the rear of the frontal lobe is a strip of motor cortex, from whence movement is initiated.

The Cerebrum - Shippensburg University of Pennsylvania

webSPACE.ship.edu/cgboer/genpsycerebrium.html

The cerebrum--which is just Latin for "brain"-- is the newest (evolutionarily) and largest part of the brain as a whole.It is here that things like perception, imagination, thought, judgment, and decision occur. The surface of the cerebrum -- the cerebral cortex-- is composed of six thin layers of neurons, which sit on top of a large ...

Cerebrum - Simple English Wikipedia, the free ...

<https://simple.wikipedia.org/wiki/Cerebrum>

The cerebrum is the largest part of the brain.It is in the front part of the brain. It contains about 15 billion cells, and is the latest brain structure to have evolved. Function. The cerebrum takes in data from sight and other sense organs, and 'makes sense' of it (interprets it).It controls consciousness and action (voluntary muscular ...

Cerebrum

The cerebrum is a large part of the brain containing the cerebral cortex, as well as several subcortical structures, including the hippocampus, basal ganglia, and olfactory bulb. In the human brain, the cerebrum is the uppermost region of the central nervous system. The prosencephalon is the embryonic structure from which the cerebrum develops prenatally. In mammals, the dorsal telencephalon, or pallium, develops into the cerebral cortex, and the ventral telencephalon, or subpallium, becomes the basal ganglia. The cerebrum is also divided into approximately symmetric left and right cerebral hemispheres.
